

## COMPREHENSIVE COGNITIVE ANALYSIS – CCA RESULT

Subject uID = 3813

Ryan Grayson

G:M

Sampling Date: 21/02/2022

Sampling Protocol: Neutered Vision

<i>Marker*</i>	<i>Comment.:</i>	<i>Result**</i>	<i>Reference Range</i> <small>Age Normalized</small>
ADHD	<i>Strong Positive</i>	3.2+/-/1.2	-0.9 : 1.3
Schizophrenia		18.3 +/-/0.3	-0.3 : 36.0
ASD/ Autism&	<i>Probable</i>	-2.05 +/-/0.74	-0.4 : -1.7
Depression		0.8 +/-/0.06	-1.0 : 0.3
OCD		2.1 +/-/0.8	-4.3 : -1.0
Addiction	<i>Strong Negative</i>	34.8 +/-/1.54	-9.0 : -3.4
Panic disorder		0.18 +/-/0.03	0.05 : 0.1
Bipolar disorder		-3.3 +/-/0.7	-1.45 : 0.2
Anxiety	<i>Probable</i>	9.1 +/-/0.4	3.40 : 7.8

\*All markers are calculated through multiple frameworks. This allows for greater accuracy and flexibility when determining results.

\*\*All results are calculated using a normalization procedure that takes into account age, gender, and sampling protocol. This ensures that the results are accurate and can be compared fairly.

∴ These are not deterministic diagnoses and should not be used apart from clinical examination and they should not be used solely to make decisions about patient's health without input from a qualified healthcare professional.
